| Individual papers   GPT-4.1      | 0.00               | 0.94         |
| Individual papers   GPT-4.1 Mini | 0.00               | 0.88         |
| Individual papers   GPT-5.1      | 0.00               | 0.86         |
| Collections   GPT-5 Mini         | 0.00               | 0.87         |
| Collections   GPT-5 Nano         | 0.00               | 0.81         |
| Collections   GPT-4.1            | 0.00               | 0.95         |
| Collections   GPT-4.1 Mini       | 0.00               | 0.94         |
| Collections   GPT-5.1            | 0.00               | 0.89         |
|                                  | Question bootstrap | Repeat noise |

Question-bootstrap uncertainty uses the paired 20-question CI already saved per item. Repeat-noise uncertainty uses within-item variation across the 5 augmentation repeats.
